
What Instrument Panel options do we have?

Posted by Steve - 2008/01/24 23:33

In the experimental kits your options for panels are only limited by your imagination and budget:)

To help the builder we have designed two different panels.

One is a steam gauge approach to flight instruments.

The other is an Electronic Efi system based around the Enigma.

The advantage of using one of these two designs is that templates are already available and you know the clearances will be right on these designs.
