Will you be offering a conventional gear (taildragger) version of the Cheetah? If so, what would be the performance specs for that configuration?

Hello Bob,

We do offer a conventional gear version of the Cheetah XLS now. The performance is really almost identical. Maybe a little bit faster due to a little less drag from the training wheel not being present.

Currently we are stocking for immediate delivery only the tri-gear aircraft. If interest warrents, we may stock a tail dragger in the future but at the present time we have 2 tri-gear aircraft in stock.

Regards,

Jon
